1 The LOCKSS peer-to-peer digital preservation system
 Petros Maniatis, Mema Roussopoulos, T. J. Giuli, David S. H. Rosenthal, Mary Baker
February 2005 **ACM Transactions on Computer Systems (TOCS)**, Volume 23 Issue 1
Publisher: ACM PressFull text available: [pdf\(715.30 KB\)](#)Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

The LOCKSS project has developed and deployed in a world-wide test a peer-to-peer system for archival information published on the Web. It consists of a large number of independent, low-cost nodes that detect and repair damage to their content by voting in "opinion polls." Based on this experience, a novel protocol for voting in systems of this kind. It incorporates rate limiting, digital preservation, replicated storage, and a distributed system of checks and balances.

June 1995 **ACM SIGAPP Applied Computing Review**, Volume 3 Issue 1
Publisher: ACM PressFull text available: [pdf\(801.12 KB\)](#)Additional Information: [full citation](#), [abstract](#), [index terms](#)

An introduction to network security, basic definitions and a brief discussion of the architecture of the Internet. The Intercorrelation(OSI) Reference Model is open to the paper. The relationship between TCP/IP and other security protocols is provided to the major protocols in TCP/IP suite and the security features and problems in the security of the Internet are discussed in the context of the protocol services.

Additional Information: [full citation](#), [abstract](#)

The papers in this special issue were compiled from responses to the announcement in the July notices posted over the ARPAnet. The interest being shown in this area is reflected in the sixty | half the papers were received over the computer network.

5 Formalizing the safety of Java, the Java virtual machine, and Java card

 Pieter H. Hartel, Luc Moreau

December 2001 **ACM Computing Surveys (CSUR)**, Volume 33 Issue 4

Publisher: ACM Press

Full text available:  [pdf\(442.86 KB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#)

We review the existing literature on Java safety, emphasizing formal approaches, and the impact such as smartcards. The conclusion is that although a lot of good work has been done, a more extensive set of machine-readable formal models of the whole of Java and its implementation. This is a foundation to build trust in Java safety, and thence to achieve ITSEC level 6 or Common Crite ...

6 A high-level abstraction of shared accesses

 Peter J. Keleher

February 2000 **ACM Transactions on Computer Systems (TOCS)**, Volume 18 Issue 1

Publisher: ACM Press

Full text available:  [pdf\(183.57 KB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#)

We describe the design and use of the tape mechanism, a new high-level abstraction of accesses that consolidate and generalize a number of recent protocol optimizations, including update-based locking usually created by "recording" shared accesses. The resulting recordings can be used to anticipate movement to application semantics. Tapes-based mechanisms a ...

Publisher: ACM Press

Full text available:  pdf(301.30 KB)

Additional Information: [full citation](#), [abstract](#), [references](#), [cited by](#)

This paper presents a new approach called *model-carrying code* (MCC) for safe execution of untrusted code that is equipped with a concise high-level model of its security-relevant behavior. It provides a bridge between high-level security policies and low-level binary code, thereby enabling analyses which users can use a fully automated verification procedure to determine if the code ...

10 [Endorsements, licensing, and insurance for distributed system services](#)

 Gennady Medvinsky, Charlie Lai, B. Clifford Neuman

November 1994 **Proceedings of the 2nd ACM Conference on Computer and communications**

Publisher: ACM Press

Full text available:  pdf(743.09 KB)

Additional Information: [full citation](#), [abstract](#), [references](#), [cited by](#)

Clients in a distributed system place their confidence in many servers, and servers themselves in the competence of potential service providers. When a system spans administrative boundaries it is difficult to determine the competence of the servers. This paper examines the issue of confidence in large distributed systems. In the "real world," one relies on endorsements, licensing, ...
